

Mr. Schwantner is a hardworking professional who holds an impressive level of networking and network security knowledge coupled with an even more impressive work ethic. During his time as part of our team Mr. Schwantner improved our overall network security posture across a range of Cisco networking devices and operating systems by single handedly completing all networking security technical implementation guides (STIGs). Working within the implemented Risk Management Framework he identified gaps within the policies and procedures and provided recommendations to rectify these gaps with regards to network security. Mr. Schwantner also utilized various software platforms to include SolarWinds and Tenable ACAS to assist in configuration management, vulnerability identification and to back up network devices. He was also responsible for cryptographic keys as part of our communication security plan and assisted with secure connections to outside entities as needed. Mr. Schwantner would be a great asset to any organization seeking a networking and security professional and he is willing to go above and beyond to meet the needs of the organization.

Sincerely,

Cameron Carter, CISSP

General Dynamics Information Technology

End to End Engineer / IT Team Lead
